RE: Order No. R4-2015-0460 via email: joshua.cwikla@waterboards.ca.gov

Mr. Cikla,

In response to your request dated December 18, 2015, Cbase Corporation has no known sumps, pits or discharges of well drilling fluids, well completion fluids, or oil production fluids that have occurred within the time we have owned or operated our oil wells in the Ramona Oilfield, State of California, County of Ventura that we operate in.

All oil and water produced from our wells is separated into storage tanks. Oil is transported via pipeline to a trucking facility where it is then hauled by trucks to a refinery. During the first nine months of 2015, the volume of oil produced average 1948 barrels per month.

All produced water from our oil operations is disposed into our Division of Oil and Gas permitted Ramona #11 water disposal well, at a depth of 3,420' subsurface into the same formation as which the oil and water is produced from. During the first nine months of 2015, the volumes of water disposed average 2540 barrels per month.

Pursuant to the California Water Code section 13267:

I, Jeff Basenberg as Corporate Secretary of Cbase Corporation certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

Yours truly,

Jeff Basenberg, Secretary
Cbase Corporation
